It currently consists of 19 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                      Submitted (16-SEP-1999) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Feb 18, 2000 this sequence version replaced gi:5902992.
                                                                                                                                                                                                                                                                                                                                                            NOTE: This is a 'working draft' sequence. It currently consists of 52 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sap of unknown length contig of 847 bp in length gap of unknown length contig of 847 bp in length contig of 877 bp in length contig of 820 bp in length gap of unknown length gap of unknown length contig of 919 bp in length gap of unknown length contig of 876 bp in length gap of unknown length gap of unknown length contig of 832 bp in length gap of unknown length contig of 832 bp in length gap of unknown length gap of unknown length contig of 823 bp in length gap of unknown length gap of unknown length gap of unknown length gap of unknown length contig of 1227 bp in length gap of unknown length

                                                                                                                                                                                                                                                                                                                   NOTE: This is a 'vorking draft' sequence. It currently consists of 22 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
Shah, R.S., Shekher, M., Spiegel, L.A., Toth, K. and Vil, M.D.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           44540: contig of 44540 bp in length

The orientation of the sequence is from SP6 to T7 of the PAC clone. Genes were predicted from the integrated results of the Genes were predicted from the integrated results of the following:GENSCANI.0, BLASTX.0 as well as SplicePredictor (October 1998 version). The genomic sequence was sparched against the non- redundant database NRP (PIR. SWISSPROT, GENBERT, DBB) from MAFF DNA bank and the cDNA sequence database at RGP. Protein similarities of the coding regions were searched against NRP with BLASTP2.0. ESTS represent the identified cDNA sequences using BLASTP2.0. ESTS represent the identified cDNA and RGP clone ID. This sequence of this clone has an overlap with POS41H01 clone, DDDJ:ADDJ:ADDJSALTANI.0 and CASTPANI.0 with the corresponding DDBJ accession no.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .13953,14703. .14914,14920. .15114,15144. .15314,

Submitted (06-JUN-2000) to the EMBL/GenBank/DDBJ databases on May 5, 2000 this sequence version replaced gi:7242501.

IMPORTANT: This sequence is unfinished and does not necessarly represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continue. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage, etc. . even if efforts are made to eliminate these contaminating sequences. The following BAC sequence is oriented
